# 1. Functional Description

---

## 1.1 Product description

The CDTop CD-SA1209S module utilizes the MediaTek new generation GPS Chipset MT3339 that support various location and navigation applications, including autonomous GPS, QZSS, SBAS(note) ranging (WAAS, EGNOS, GAGAN, MSAS), QZSS, DGPS(RTCM) and AGPS. It support up to 210 PRN channels with 66 search channels and 33 simultaneous tracking channels.

It is the industry's highest level of sensitivity (-165dBm) and instant Time-to-First Fix (TTFF). Precise GPS signal processing give the ultra-precise positioning under low receptive, high velocity conditions. Up to 12 multi-tone active interference canceller (ISSCC2011 award), customer can have more flexibility in system design.

Power management design makes CD-SA1209S easily integrated into your system without extra voltage regulator. CD-SA1209S allows direct battery connection, no need any external LDO and gives customers plenty of choices for their application circuit.

The excellent low power consumption of CD-SA1209S make it easier to applied to power sensitive devices, especially portable applications, need not worry about operating time anymore and user can get more fun.

It also combined with many advanced features including AlwaysLocate™, EASY™, EPO™, and logger function.

### Application:

- ✓ Asset management
- ✓ Handheld Device
- ✓ M2M application
- ✓ Security industry
- ✓ Surveillance
- ✓ Tablet PC/PLB/MID

## 1.2 Features

- 33 tracking/ 66 acquisition-channel GPS receiver
- AGPS Support for Fast TTFF (EPO™ Enable 7 days/14 days )
- AlwaysLocate: Intelligent Algorithm (Advance Power Periodic Mode) for power saving
- EASY: Self-Generated Orbit Prediction for instant positioning fix
- GPS Consumption current(@3.3V):
  - Acquisition: 20mA Typical
  - Tracking: 17mA Typical
- High accuracy 1-PPS timing support for Timing Applications ( $\pm 20$ ns jitter)
- High Update Rate: up to 10Hz<sup>(note1)</sup>
- Logger function Embedded<sup>(note2)</sup>
- Supports QZSS, SBAS(WAAS, EGNOS, GAGAN, MSAS) ranging
- Ultra-High Sensitivity: -165dBm
- ◆ E911, RoHS, REACH compliant
- ◆ CE, FCC Certification

Note 1: SBAS can only be enabled when update rate is less than or equal to 5Hz.

Note2: Some features need special firmware or command programmed by customer.

### 1.3 System Block Diagram

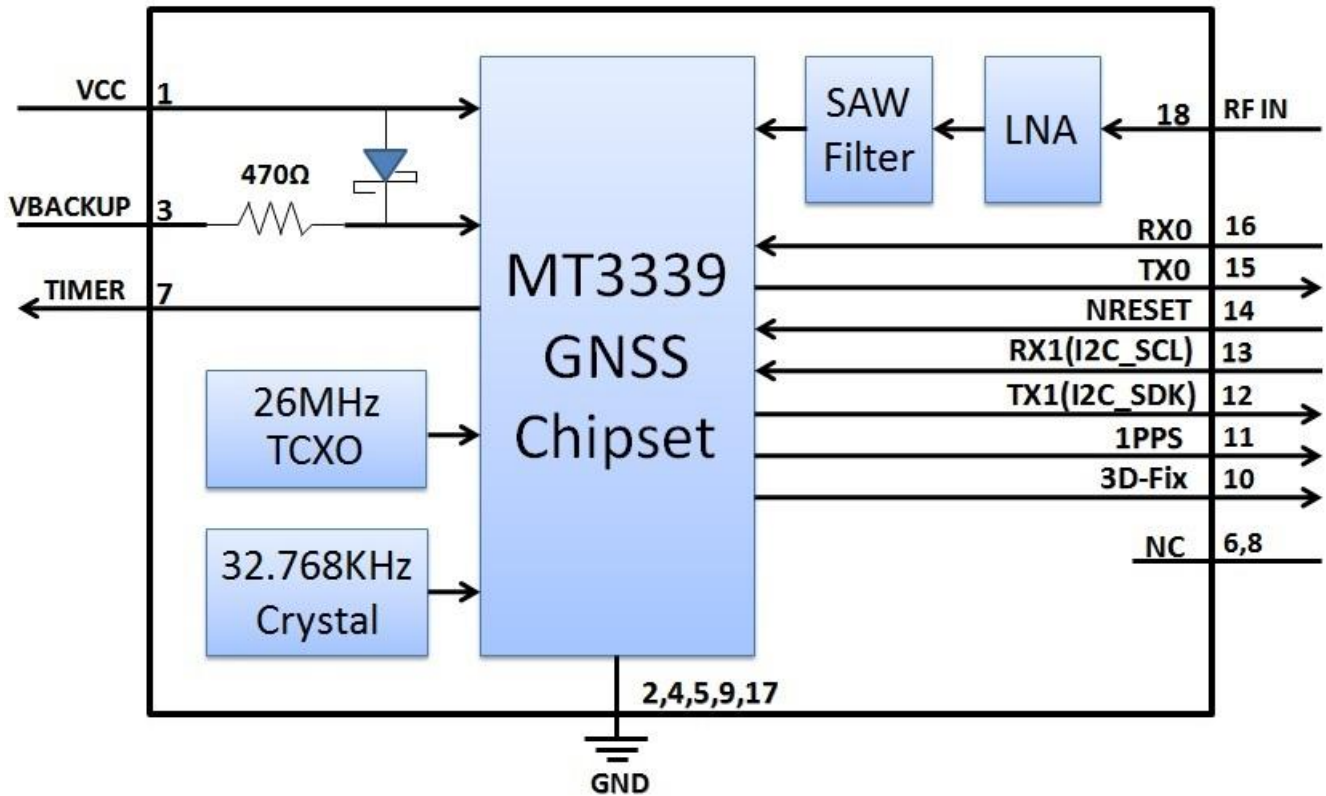

Figure 1-1: System Block Diagram.

### 1.4 Multi-tone active interference canceller

Because different application (Wi-Fi , GSM/GPRS,3G/4G,Bluetooth )are integrated into navigation system , the harmonic of RF signal will influence the GPS reception , The multi-tone active interference canceller (abbr: MTAIC ) can reject external RF interference which come from other active components on the main board , to improve the capacity of GPS reception without any needed HW change in the design .CD-SA1209S can cancel up to 12 independent channel interference continuous wave (CW).

### 1.5 1PPS

A pulse per second (1 PPS) is an electrical signal which precisely indicates the start of a second with the accuracy of ±20ns RMS (Root Mean Square). The PPS signal is provided through a designated output pin for many external applications. The pulse is not only limited to being active every second but is also allowed to set up the required duration, frequency, and active high/low through a programmable user-defined setting.

### 1.6 AGPS Support for Fast TTFF (EPO™)

The AGPS (EPO™) supply the predicated Extended Prediction Orbit data to speed TTFF ,users can download the EPO data to GPS engine from the FTP server by internet or wireless network ,the GPS engine will use the EPO data to assist position calculation when the navigation information of satellites are not enough or weak signal zone .

### 1.7 AlwaysLocate™ (Advance Power Periodic Mode)

Embedded need to be executed fully all the time, the algorithm can be set by different necessary to decide the operation level of GPS function, reduce power consumption, it will suffer positing accuracy to get the target of power saving and extend the usage time of product.

Figure 1-2: Always Locatie

### 1.8 EASY™

The EASY™ is embedded assist system for quick positioning, the GPS engine will calculate and predict automatically the single ephemeris ( Max. up to 3 days )when power on, and save the predict information into the memory , GPS engine will use these information for positioning if no enough information from satellites, so the function will be helpful for positioning and TTF improvement under indoor or urban condition, the Backup power (VBACKUP) is necessary.

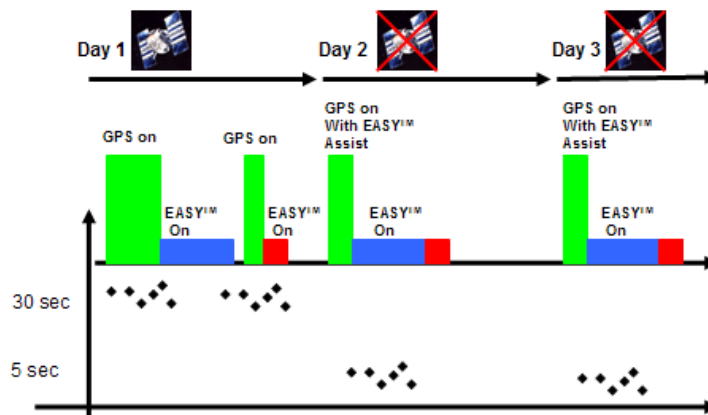

Figure 1-3 EASY System operation

Please refer to the Fig 1-3, When GPS device great the satellite information from GPS satellites, the GPS engine automatically pre-calculate the predict orbit information for 3 days.

The GPS device still can quickly do the positioning with EASY™ function under weak GPS signal.

### 1.9 Embedded Logger function(LOCUS)

The Embedded Logger function(LOCUS) don't need host CPU (MCU ) and external flash to handle the operation , GPS Engine will use internal flash (embedded in GPS chipset ) to log the GPS data (Data format : UTC, Latitude , longitude, Valid ,Checksum ), the maximum log duration is up to two days under AlwaysLocate™.

## 2. Specification

### 2.1 Mechanical Dimension

Dimension: (Unit: mm, Tolerance: +/- 0.2mm)

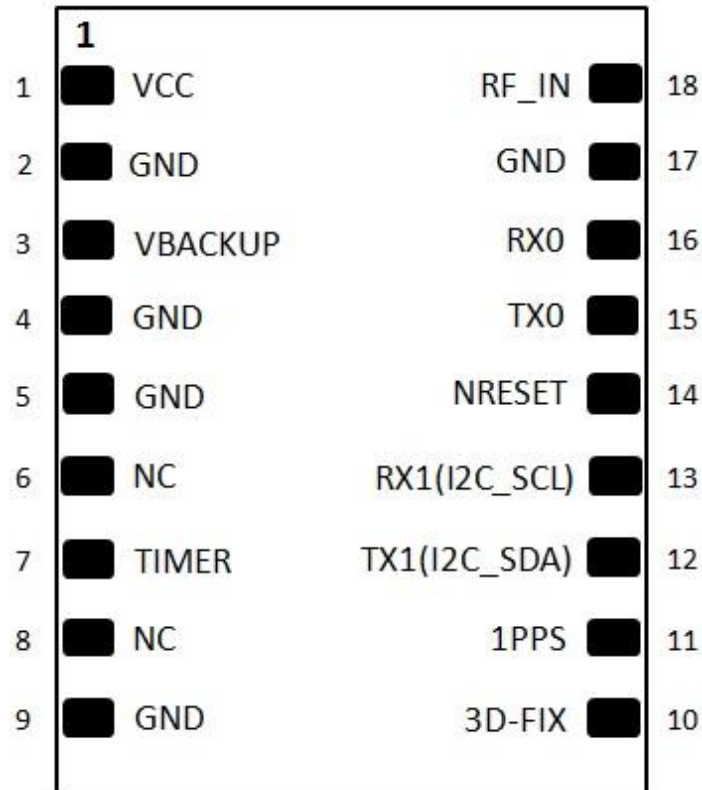

### 2.2 Recommended PCB pad Layout

(Unit: mm, Tolerance: 0.1mm)

## 2.3 Pin Configuration

(Top view)

## 2.4 Pin Assignment

| Pin | Name            | I/O | Description & Note                                       |
|-----|-----------------|-----|--|
| 1   | VCC             | PI  | Main DC power input                                      |
| 2   | GND             | P   | Ground   |
| 3   | VBACKUP         | PI  | Backup power input for RTC & navigation data keep        |
| 4   | GND             | P   | Ground   |
| 5   | GND             | P   | Ground   |
| 6   | NC              | --  | Not Connect  |
| 7   | TIMER           | O   | The timer function support a time tick                   |
| 8   | NC              | --  | Not Connect  |
| 9   | GND             | P   | Ground   |
| 10  | 3D_FIX          | O   | 3D-Fix Indicator   |
| 11  | 1PPS            | O   | 1PPS Time Mark Output 2.8V CMOS Level                    |
| 12  | TX1 / (I2C_SDA) | O   | Serial Data Output / I2C Serial data(by custom firmware) |
| 13  | RX1 / (I2C_SCL) | I   | Serial Data Input / I2C Serial clock(by custom firmware) |
| 14  | NRESET          | I   | Reset input, Low Active                                  |
| 15  | TX0             | O   | Serial Data Output A for NMEA output (TTL)               |
| 16  | RX0             | I   | Serial Data Input A for Firmware update (TTL)            |
| 17  | GND             | P   | Ground   |
| 18  | RF-IN           | I   | Antenna Signal Input                                     |

## 2.5 Description of I/O Pin

### Pin1, VCC

The main DC power supply for the module. The voltage should be kept between from 3.0V to 4.3V. The ripple must be limited under 50mVpp (Typical: 3.3V).

### Pin2, Pin4, Pin5, Pin9, Pin17, GND

Ground

### Pin3, VBACKUP

This connects to the backup power of the GPS module. Power source (such as battery) connected to this pin will help the GPS chipset in keeping its internal RTC running when the main power source is removed. The voltage should be kept between 2.0V~4.3V, Typical 3.0V.

If VBACKUP power was not reserved, the GPS module will perform a lengthy cold start every time it is powered-on because previous satellite information is not retained and needs to be re-transmitted.

If not used, keep floating.

### Pin6, NC

This pin is not connected, keep floating.

### Pin7, TIMER

The timer function support a time tick generation of 31.25ms resolution, the period of timer can be from 31.25ms to 524287 s, the pin outputs signal during the timer period and becomes a input pin after time out, the system can use the pin to connect an external LDO controller and pull high circuit to enable other device for specified operation (ex: wake up GSM/GPRS processor to transmit location data of asset during one period, then enter power saving mode after finish its job)

If not used, keep floating.

### Pin8, NC

This pin is not connected, keep floating.

### Pin10, 3D\_FIX

The 3D\_FIX is assigned as a fix flag output. The timing behavior of this pin can be configured by custom firmware for different applications (Example: waking up host MCU). If not used, keep floating.

- Before 2D Fix

The pin should continuously output one-second high-level with one-second low-level signal

- After 2D or 3D Fix

The pin should continuously output low-level signal

Low

---

**Pin11, 1PPS**

This pin provides one pulse-per-second output from the module and synchronizes to GPS time. If not used, keep floating.

**Pin12, TX1 or I2C\_SDA**

This is the UART transmitter of the module. It is used for aiding. If not used, keep floating.

This pin can be modified to I2C\_SDA through firmware customization, it output the data for I2C application, if not used keep floating.

**Pin13, RX1 or I2C\_SCL**

This is the UART receiver of the module. It is used for aiding. If not used, keep floating.

This pin can be modified to I2C\_SCL through firmware customization, it received the clock for I2C application, if not used keep floating.

**Pin14, NRESET**

Low active, it causes the module to reset. If not used, keep floating.

**Pin15, TX0**

This is the UART transmitter of the module. It outputs GPS information for application.

**Pin16, RX0**

This is the UART receiver of the module. It is used to receive commands from system.

**Pin18, RF\_IN**

This is the GPS RF signal input pin, which can be connected to a passive antenna or an active antenna.  
*(please refer to that page 20 & 21)*

## 2.6 Specification List

| Item  | Description   |
|---|---|
| <b>GPS Solution</b>                                   | MTK MT3339  |
| <b>Frequency</b>                                      | GPS L1, 1575.42MHz  |
| <b>Sensitivity(GPS portion)</b>                       | Acquisition: -148dBm,<br>cold start Reacquisition: -163dBm<br>Hot start Tracking: -165dBm                       |
| <b>TTF</b><br>(No. of SVs>4, C/N>40dB, PDop<1.5)      | Hot start: 1 second typical<br>Warm start: 33 seconds typical<br>Cold start: 35 seconds typical, 60 seconds Max |
| <b>Position Accuracy</b>                              | Without aid:3.0m (50% CEP)<br>DGPS(SBAS(WAAS,EGNOS,MSAS)):2.5m (50% CEP)  |
| <b>Update Rate</b>                                    | 1Hz (default), maximum 10Hz   |
| <b>Baud Rate</b>                                      | 9600 bps (default)  |
| <b>Velocity Accuracy</b>                              | Without aid : 0.1m/s<br>DGPS(SBAS(WAAS,EGNOS,MSAS,GAGAN)):0.05m/s   |
| <b>Timing Accuracy(1PPS Output)</b>                   | ±20 ns RMS within 100ms in one pulse  |
| <b>Altitude</b>                                       | Maximum 18,000m (60,000 feet)   |
| <b>Velocity</b>                                       | Maximum 515m/s (1000 knots)   |
| <b>Acceleration</b>                                   | Maximum 4G  |
| <b>DGPS</b>   | SBAS(default) [WAAS, EGNOS, MSAS,GAGAN]   |
| <b>Power Supply</b>                                   | VCC : 3.0V to 4.3V ; VBACKUP : 2.0V to 4.3V   |
| <b>Current Consumption<br/>@ 3.3V,1Hz Update Rate</b> | 20mA acquisition, 17mA tracking   |
| <b>Backup Power Consumption@ 3V</b>                   | 7uA TYP.  |
| <b>Working Temperature</b>                            | -30 °C to +85 °C  |
| <b>Dimension</b>                                      | 12 x 9 x 2.1 mm, QFN  |
| <b>Weight</b>   | 0.6g  |

## 2.7 Absolute Maximum Ratings

The voltage applied for VCC should not exceed 4.3VDC.

|                        | Symbol  | Min. | Typ. | Max. | Unit |
|------------------------|---------|------|------|------|------|
| Power Supply Voltage   | VCC     | 3.0  | 3.3  | 4.3  | V    |
| Backup battery Voltage | VBACKUP | 2.0  | 3.0  | 4.3  | V    |

## 2.8 Operating Condition

|                                 | Condition | Min. | Typ. | Max. | Unit |
|---------------------------------|-----------|------|------|------|------|
| Operation supply Ripple Voltage | —         | —    | —    | 50   | mVpp |
| RX0 TTL H Level                 | —         | 2.0  | —    | VCC  | V    |
| RX0 TTL L Level                 | —         | 0    | —    | 0.8  | V    |
| TX0 TTL H Level                 | —         | 2.4  | —    | 2.8  | V    |
| TX0 TTL L Level                 | —         | 0    | —    | 0.4  | V    |

## 2.9 GPS External Antenna Specification(Recommended)

It is important that the antenna gets a clear view of the sky and is positioned on a surface level to the horizon for best results. The following specification has to meet for the use reference design.

| Characteristic     | Specification                 |
|--------------------|-------------------------------|
| Polarization       | Right-hand circular polarized |
| Frequency Received | 1.57542GHz +/- 1.023MHz       |
| Power Supply       | 3.3V                          |
| DC Current         | 3mA < IDC < 30mA at 3.3V      |
| Total Gain         | + 25dBi                       |
| Output VSWR        | < 2.5                         |
| Impedance          | 50Ω                           |
| Noise Figure       | < 1.5dB                       |

## 3. Protocols

### 3.1 NMEA Output Sentences

**Table-1** lists each of the NMEA output sentences specifically developed and defined by MTK for use within MTK products

| Table-1: Each of the NMEA output sentences |  |
|--|--|
| Option                                     | Description  |
| <b>GGA</b>                                 | Time, position and fix type data.  |
| <b>GSA</b>                                 | GPS receiver operating mode, active satellites used in the position solution and DOP values.   |
| <b>GSV</b>                                 | The number of GPS satellites in view satellite ID numbers, elevation, azimuth, and SNR values. |
| <b>RMC</b>                                 | Time, date, position, course and speed data. Recommended Minimum Navigation Information.       |
| <b>VTG</b>                                 | Course and speed information relative to the ground.   |

## GGA—Global Positioning System Fixed Data. Time, Position and fix related data

**Table-2** contains the values for the following example :

*\$GPGGA,091626.000,2236.2791,N,12017.2818,E,1,10,1.00,8.8,M,18.7,M,,\*66*

| Table-2: GGA Data Format |            |        |   |
|--------------------------|------------|--------|---|
| Name                     | Example    | Units  | Description                                 |
| Message ID               | \$GPGGA    |        | GGA protocol header                         |
| UTC Time                 | 091626.000 |        | hhmmss.sss                                  |
| Latitude                 | 2236.2791  |        | ddmm.mmmm                                   |
| N/S Indicator            | N          |        | N=north or S=south                          |
| Longitude                | 12017.2818 |        | dddmm.mmmm                                  |
| E/W Indicator            | E          |        | E=east or W=west                            |
| Position Fix Indicator   | 1          |        | See <b>Table-4</b>                          |
| Satellites Used          | 10         |        | Range 0 to 14                               |
| HDOP                     | 1.00       |        | Horizontal Dilution of Precision            |
| MSL Altitude             | 8.8        | meters | Antenna Altitude above/below mean-sea-level |
| Units                    | M          | meters | Units of antenna altitude                   |
| Geoidal Separation       | 18.7       | meters |   |
| Units                    | M          | meters | Units of geoids separation                  |
| Age of Diff. Corr.       |            | second | Null fields when DGPS is not used           |
| Checksum                 | *66        |        |   |
| <CR> <LF>                |            |        | End of message termination                  |

| Table-3: Position Fix Indicator |                      |
|---------------------------------|----------------------|
| Value                           | Description          |
| 0                               | Fix not available    |
| 1                               | GPS fix              |
| 2                               | Differential GPS fix |

### GSA—GPS DOP and Active Satellites

**Table-4** contains the values for the following example :  
*\$GPGSA,A,3,01,11,07,18,30,193,22,08,28,03,,,1.32,1.00,0.87\*3A*

| Table-4: GSA Data Format |         |       |                                  |
|--------------------------|---------|-------|----------------------------------|
| Name                     | Example | Units | Description                      |
| Message ID               | \$GPGSA |       | GSA protocol header              |
| Mode 1                   | A       |       | See <b>Table-5</b>               |
| Mode 2                   | 3       |       | See <b>Table-6</b>               |
| Satellite Used           | 01      |       | SV on Channel 1                  |
| Satellite Used           | 11      |       | SV on Channel 2                  |
| ....                     | ....    | ....  | ....                             |
| Satellite Used           |         |       | SV on Channel 12                 |
| PDOP                     | 1.32    |       | Position Dilution of Precision   |
| HDOP                     | 1.00    |       | Horizontal Dilution of Precision |
| VDOP                     | 0.87    |       | Vertical Dilution of Precision   |
| Checksum                 | *3A     |       |                                  |
| <CR> <LF>                |         |       | End of message termination       |

| Table-5: Mode 1 |  |
|-----------------|--|
| Value           | Description  |
| M               | Manual—forced to operate in 2D or 3D mode          |
| A               | 2D Automatic—allowed to automatically switch 2D/3D |

| Table-6: Mode 2 |                         |
|-----------------|-------------------------|
| Value           | Description             |
| 1               | Fix not available       |
| 2               | 2D (< 4 SVs used)       |
| 3               | 3D ( $\geq$ 4 SVs used) |

## GSV— Satellites in View

**Table-7** contains the values for the following example :

```
$GPGSV,4,1,15,01,83,048,45,11,67,006,42,07,58,234,42,18,56,039,42*71
$GPGSV,4,2,15,30,51,284,42,42,51,129,35,193,33,140,38,22,32,120,41*48
$GPGSV,4,3,15,08,31,041,34,28,29,326,38,03,25,147,37,17,13,270,*7C
$GPGSV,4,4,15,09,03,206,22,16,02,119,,27,01,066,*4B
```

| Table-7: GPGSV Data Format |         |         |  |
|----------------------------|---------|---------|--|
| Name                       | Example | Units   | Description  |
| Message ID                 | \$GPGSV |         | GSV protocol header  |
| Number of Messages         | 4       |         | Range 1 to 4<br><i>(Depending on the number of satellites tracked, multiple messages of GSV data may be required.)</i> |
| Message Number1            | 1       |         | Range 1 to 4   |
| Satellites in View         | 15      |         |  |
| Satellite ID               | 01      |         | Channel 1 (Range 1 to 32)  |
| Elevation                  | 83      | degrees | Channel 1 (Maximum 90)   |
| Azimuth                    | 048     | degrees | Channel 1 (True, Range 0 to 359)   |
| SNR (C/No)                 | 45      | dBHz    | Range 0 to 99,(null when not tracking)   |
| ....                       | ....    | ....    | ....   |
| Satellite ID               | 18      |         | Channel 4 (Range 1 to 32)  |
| Elevation                  | 56      | degrees | Channel 4 (Maximum 90)   |
| Azimuth                    | 039     | degrees | Channel 4 (True, Range 0 to 359)   |
| SNR (C/No)                 | 42      | dBHz    | Range 0 to 99, (null when not tracking)  |
| Checksum                   | *71     |         |  |
| <CR> <LF>                  |         |         | End of message termination   |

## RMC—Recommended Minimum Navigation Information

**Table-8** contains the values for the following example :

*\$GPRMC,091626.000,A,2236.2791,N,12017.2818,E,0.32,172.25,160418,,,A\*62*

| Table-8: RMC Data Format |            |         |   |
|--------------------------|------------|---------|---|
| Name                     | Example    | Units   | Description   |
| Message ID               | \$GPRMC    |         | RMC protocol header   |
| UTC Time                 | 091626.000 |         | hhmmss.sss  |
| Status                   | A          |         | A=data valid or V=data not valid                                |
| Latitude                 | 2236.2791  |         | ddmm.mmmm   |
| N/S Indicator            | N          |         | N=north or S=south  |
| Longitude                | 12017.2818 |         | dddmm.mmmm  |
| E/W Indicator            | E          |         | E=east or W=west  |
| Speed over Ground        | 0.32       | knots   |   |
| Course over Ground       | 172.25     | degrees | True  |
| Date                     | 160418     |         | ddmmyy  |
| Magnetic Variation       |            | degrees |   |
| Mode                     | A          |         | A= Autonomous mode<br>D= Differential mode<br>E= Estimated mode |
| Checksum                 | *62        |         |   |
| <CR> <LF>                |            |         | End of message termination                                      |

### VTG—Course and speed information relative to the ground

**Table-9** contains the values for the following example:

`$GPVTG,172.25,T,,M,0.32,N,0.59,K,A*33`

| Table-9: VTG Data Format |         |         |   |
|--------------------------|---------|---------|---|
| Name                     | Example | Units   | Description   |
| Message ID               | \$GPVTG |         | VTG protocol header   |
| Course                   | 172.25  | degrees | Measured heading  |
| Reference                | T       |         | True  |
| Course                   |         | degrees | Measured heading  |
| Reference                | M       |         | Magnetic  |
| Speed                    | 0.32    | knots   | Measured horizontal speed                                       |
| Units                    | N       |         | Knots   |
| Speed                    | 0.59    | km/hr   | Measured horizontal speed                                       |
| Units                    | K       |         | Kilometers per hour   |
| Mode                     | A       |         | A= Autonomous mode<br>D= Differential mode<br>E= Estimated mode |
| Checksum                 | *33     |         |   |
| <CR> <LF>                |         |         | End of message termination                                      |

**Note:** when inputting the command `$PMTK353,0,1,0,0,0*2A` , \$GNVTG will change to \$GLVTG(For GLONASS). When inputting the command `$PMTK353,1,0,0,0,0*2A` : \$GNVTG will change to \$GPVTG (For GPS).

### 3.2 MTK NMEA Command Protocols

**Packet Type:**

103 PMTK\_CMD\_COLD\_START

**Packet Meaning:**

Cold Start : Don't use Time, Position, Almanacs and Ephemeris data at re-start.

**Example:**

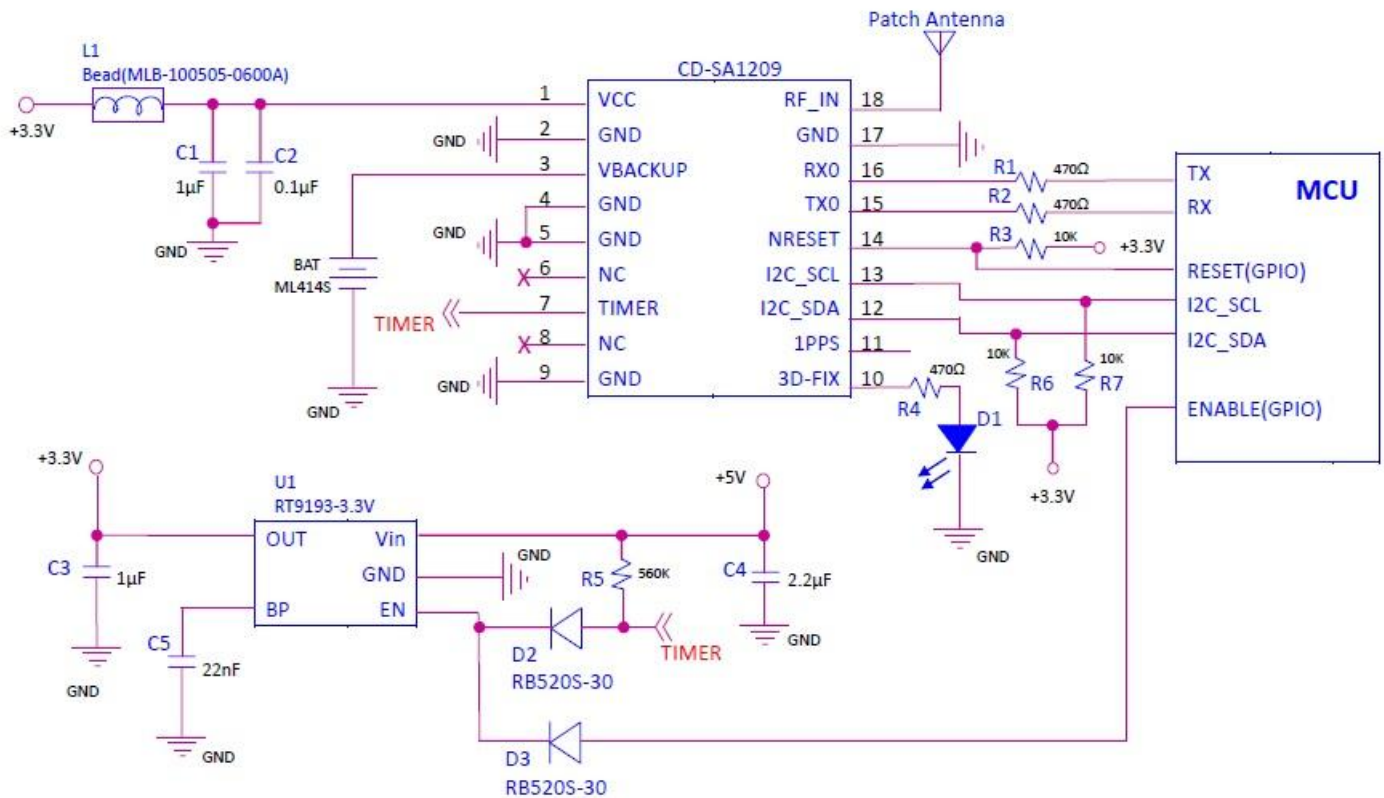

`$PMTK103*30<CR><LF>`

## 4. Reference Design

This chapter introduces the reference schematic design for the best performance. Additional tips and cautions on design are well documented on Application Note, which is available upon request.

### 4.1 Patch (Passive) Antenna

When using a passive antenna, please connect the antenna directly to Pin18, RF\_IN.

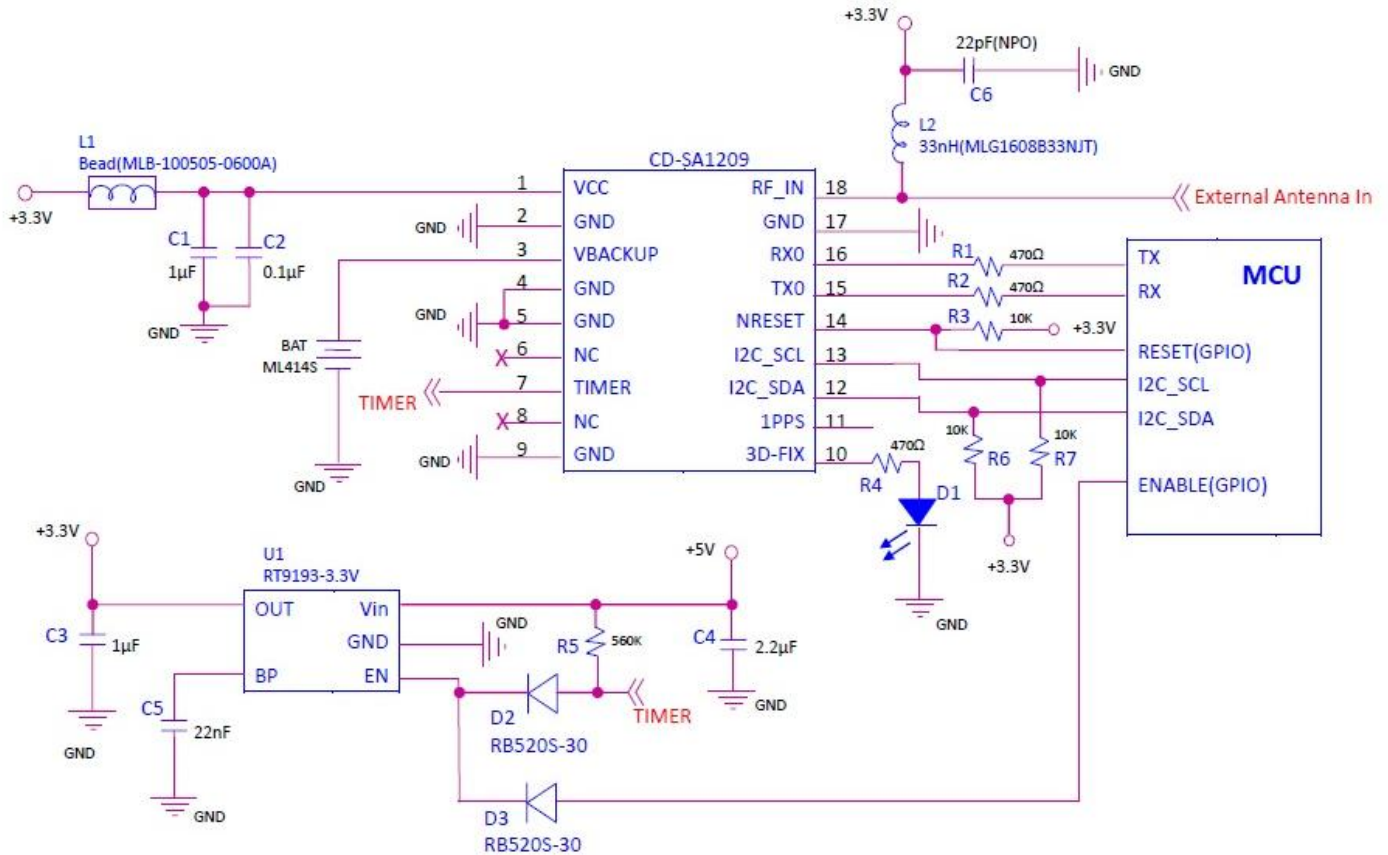

**Note:**

1. Ferrite bead L1 is added for power noise reduction.
2. C1 and C2 bypass capacitor should be put near the module.  
For C3, the value chosen depends on the amount of system noise, the range from 1uF to 100uF is reasonable.
3. Damping resistors R1 and R2 could be modified based on system application for EMI.
4. Resistor R3 is added for Pull-up to VCC.

## 4.2 Active Antenna

When using an active antenna, please connect the antenna directly to Pin18, RF\_IN.

### Note:

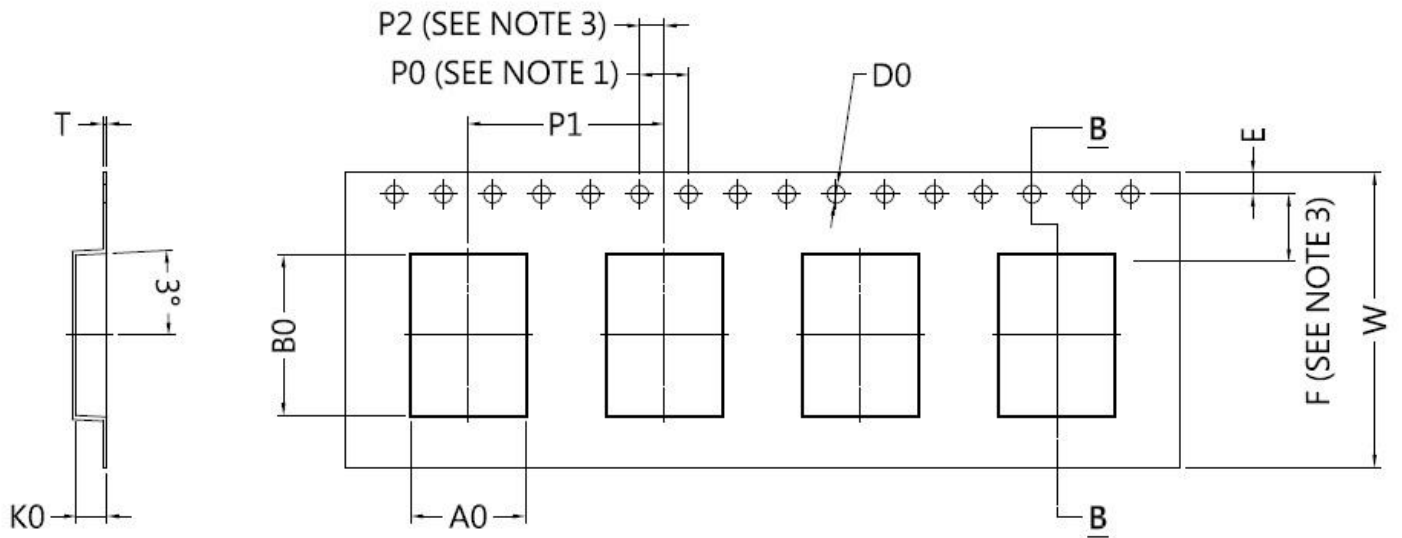

1. Ferrite bead L1 is added for power noise reduction.
2. C1 and C2 bypass capacitor should be put near the module.
3. For C3, the value chosen depends on the amount of system noise, the range from 1μF to 100μF is reasonable.
4. Damping resistors R1 and R2 could be modified based on system application for EMI.
5. Resistor R3 is added for Pull-up to VCC.
6. L2 choke inductor should be put near the Pin18 and C6 RF bypass capacitor should be put near the L2.

## 5. Tape Reel Packing Information

One Reel : 1,000pcs

|           |  |             |              |             |                        |
|-----------|--|-------------|--------------|-------------|------------------------|
| SPEC      | 13" REEL W: 24 mm  |             |              |             |                        |
|           | Material: HIPS   |             |              |             |                        |
| ITEM      | A  | B           | C            | D           | Surface Resistivity    |
